

HUSTLR — PHASE 1 VIDEO SCRIPT

Guidewire DEVTrails 2026 • 2 Minutes • Screen Recording + Voiceover

[SCREEN] = navigate here. [ACTION] = do this while speaking.

SECTION 1 — THE PROBLEM [0:00-0:12]

[SCREEN: Home screen — rain alert banner visible]

[ACTION: Hold. Don't scroll. Let banner sit for 2 seconds before speaking.]

"India's Q-commerce riders — Zepto, Blinkit — operate within a 2km radius of one dark store. One flooded street. Their entire zone is gone. No insurance product covers that income loss.

Hustlr does."

SECTION 2 — THE PRODUCT [0:12-0:28]

[SCREEN: Home screen — slow scroll top to bottom]

[ACTION: Pause on ISS score (62, AMBER). Pause on Standard Shield card. Land on ₹680 nudge.]

"This is Raj. Zepto rider, Bengaluru.

At onboarding, his Income Stability Score — 62 — was calculated from his zone's flood history and disruption frequency. It recommended Standard Shield. ₹87 a week. Fixed for 6 months.

Hustlr is the intelligence layer on top of Guidewire PolicyCenter, ClaimCenter, and BillingCenter — making this segment insurable for the first time."

SECTION 3 — THE ZERO-TOUCH CLAIM [0:28-0:57]

[SCREEN: Claims screen]

[ACTION: Hold on full list. Tap top Rain Disruption APPROVED entry if interactive.]

"Every claim here fired automatically. Raj never touched the app.

IMD confirmed 72mm of rainfall — above the 64.5mm threshold. Shift window: confirmed. Then the fraud engine ran six independent checks in under two seconds — GPS against cell tower, Wi-Fi fingerprint, IP geolocation, accelerometer, battery state, and claim timing.

Fraud Risk Score: 14. Clean.

A fraudster can fake GPS. They cannot simultaneously fake a cell tower ID, a Wi-Fi fingerprint, and active motion on the accelerometer — all at once. That coherence check is what breaks the syndicate.

Claim pushed to Guidewire ClaimCenter. ₹300 credited. Zero forms. Zero adjusters.

Raj did nothing. The system did everything."

[ACTION: 1 second silence. Then navigate to Wallet.]

SECTION 4 — THE MONEY [0:57-1:07]

[SCREEN: Wallet screen]

[ACTION: Hold on balance card. Slow scroll through transactions.]

"₹2,935 available. ₹2,435 saved from payouts this month.

Every transaction logged — trigger type, zone, date. Workers withdraw to UPI directly."

SECTION 5 — COVERAGE [1:07-1:25]

[SCREEN: Policy & Plans — Upgrade tab]

[ACTION: Hold on four plan cards. Scroll to add-on toggles.]

"Four plans — ₹49 to ₹199. ISS score at onboarding surfaces a personalised recommendation.

Modular add-ons below — Curfew and Strike, App Downtime, Cyclone. Each toggle adds a parametric trigger at a fixed weekly cost. Internet Blackout and Accident Blockspot in Phase 2.

Eight trigger types total. If the data confirms the disruption and the worker was on shift — payout fires automatically."

SECTION 6 — CLOSE [1:25-1:40]

[SCREEN: Home screen — full dashboard]

[ACTION: Let rain banner, ISS score, active plan, ₹680 nudge all be visible.]

"Phase 1 — architecture complete.

Eight parametric triggers. Six-layer fraud engine. Full Guidewire integration across PolicyCenter, ClaimCenter, and BillingCenter.

Phase 2 is live APIs and the Flutter build.

Phase 3 is the insurer admin dashboard and Guidewire Marketplace.

Hustlr.

Income protection for every hustle."

TIMING

Section	Time	Words
1 — Problem	0:00-0:12	40
2 — Product	0:12-0:28	65
3 — Claim	0:28-0:57	110
4 — Money	0:57-1:07	35
5 — Coverage	1:07-1:25	65
6 — Close	1:25-1:40	50
TOTAL	~1:40	~365

365 words at a measured pace = ~1:40. Leaves 20 seconds of buffer for pauses, screen transitions, and the silence after "Raj did nothing." If you speak naturally and don't rush, you'll land right at 2 minutes.

DELIVERY NOTES

Section 3 is the centrepiece. Say the six signals clearly — not as a blur:
"GPS against cell tower... Wi-Fi fingerprint... IP geolocation...
accelerometer... battery state... and claim timing."

"Raj did nothing. The system did everything."
— Full stop. One second of silence. Then move to Wallet.

Close — three separate beats:
"Hustlr." [pause] "Income protection" [pause] "for every hustle."

SCREEN ORDER

Home (banner → scroll to ₹680 nudge)
→ Claims (hold on list)
→ Wallet (scroll transactions)
→ Plans (hold cards → scroll to add-ons)
→ Home (return for close)

BEFORE YOU RECORD

- [] App logo says "Hustlr" not "ShieldGig"
 - [] Claims banner says "Hustlr auto-detects..."
 - [] Profile shows "HUSTLR ID: HS-9821"
 - [] Disruption alert shows ₹300 not ₹595
 - [] Plan shows ₹87/week not ₹72/week
 - [] Headset mic, not laptop mic
-

ONE-LINER FOR Q&A

"Hustlr is a parametric income protection engine that automatically pays Q-commerce riders the moment a verified disruption stops them working — no claim filed, no adjuster involved — fully integrated with Guidewire PolicyCenter, ClaimCenter, and BillingCenter."
