

ShieldGig — 2-Minute Video Script

DEVTrails 2026: Unicorn Chase | Phase 1 Submission

PRE-RECORDING CHECKLIST

Before you press record:

- ☐ App running on Chrome at localhost
 - ☐ Demo data loaded (Karthik, Chennai, Zepto)
 - ☐ Screen recording tool open (Loom / OBS / Windows Game Bar)
 - ☐ Phone or second screen showing mobile view (optional but impressive)
 - ☐ Quiet room, no background noise
 - ☐ Read script 3 times before recording
 - ☐ Total target time: 1 minute 55 seconds
-

WHAT TO SHOW ON SCREEN

Split your recording into two parts:

- First 60 seconds: slides or simple screen with text/diagrams
- Last 60 seconds: live app demo (walk through the screens)

If you have no slides ready, just show the running app the entire time.

FULL SCRIPT

[0:00 - 0:08] OPENING HOOK

Show on screen: App splash screen or a bold title card

"Every day, 15 million gig delivery workers in India ride out into the rain, the heat, and the chaos — earning nothing if disruptions stop them. No protection. No safety net. Just loss."

Tone: Calm, serious, confident. Not rushed.

[0:08 - 0:22] PROBLEM

Show on screen: Simple stat cards or problem slide

"Karthik is a Zepto delivery partner in Chennai. During the northeast monsoon, he loses 2 to 3 working days every week to heavy rain. That is up to 1,800 rupees gone — in a single week — with no way to recover it."

"No insurance product in India covers this. Traditional insurance requires fixed income proof, takes weeks to process claims, and costs more per month than a gig worker earns in a day."

Tone: Build urgency. Pause briefly after "no way to recover it."

[0:22 - 0:40] SOLUTION

Show on screen: App dashboard screen (Karthik's home screen)

"We built ShieldGig. An AI-powered parametric income insurance platform designed specifically for platform gig workers."

"Karthik pays 72 rupees per week. When rainfall in his Adyar dark store zone exceeds 64 millimetres — the IMD Very Heavy Rain threshold — ShieldGig detects it automatically, validates Karthik was on shift, and processes his claim. He does nothing. No form. No phone call. No waiting."

Tone: Shift to confident and solution-focused. Show the dashboard while talking.

[0:40 - 0:58] HOW IT WORKS

Show on screen: Navigate through app — policy screen, then claims screen

"Our system monitors weather APIs, platform health, and city advisories every 30 minutes. When a threshold is breached in a worker's specific dark store delivery zone — not the whole city, just their zone — a claim is automatically generated."

"Payouts settle every Sunday night, matching Zepto's weekly payment cycle exactly. 70 percent releases immediately. The remaining 30 percent clears a 48-hour fraud verification window."

Tone: Technical but clear. Show the claims screen with Rain Disruption and Platform Downtime cards visible.

[0:58 - 1:15] AI AND FRAUD

Show on screen: ISS score circle on dashboard, then briefly flash claim detail fraud check

"Every worker has an Income Stability Score — a 0 to 100 risk index calculated by our XGBoost model using weather forecasts, zone disruption history, and delivery demand. This score drives dynamic weekly premiums and tells the insurer exactly who is high risk."

"Our fraud detection runs 20 signals simultaneously — GPS spoofing detection, zone depth scoring, behavioral baselines, and claim pattern analysis. Workers never submit claims, so there is no submission interface for fraudsters to exploit."

Tone: Confident. Show the fraud score card briefly — "12 out of 100 — Clean."

[1:15 - 1:35] DEMO MOMENT

Show on screen: Long press the logo — demo panel opens — tap "Trigger Rain Disruption"

"Watch what happens when a disruption hits."

(Long press ShieldGig logo — demo panel opens)

"Rain detected in Adyar zone. Threshold breached."

(Tap Trigger Rain Disruption)

"Claim generated automatically. Fraud check: 12 out of 100 — clean."

(Wait 3 seconds — claim moves from PENDING to APPROVED)

"595 rupees credited to Karthik's wallet. Sunday night. Zero human involvement."

Tone: Let the demo speak. Pause and let the UI change be visible. Do not talk over the transition.

[1:35 - 1:48] BUSINESS VALUE

Show on screen: Back to dashboard or admin dashboard if available

"For insurers, ShieldGig opens a 3,200 crore rupee untapped market — with zero claims processing cost, fraud detection that targets under 5 percent fraud rate, and a real-time loss ratio dashboard."

"This is not a welfare product. It is an AI-powered underwriting engine that makes the gig economy insurable for the first time."

Tone: Shift to business framing. This is for Guidewire judges — speak their language.

[1:48 - 1:55] EXECUTION PLAN + CLOSE

Show on screen: Phase plan or app screens scrolling

"Phase 1: Research, architecture, and working prototype — complete. Phase 2: Full MVP with 5 automated triggers and AI risk engine. Phase 3: Advanced fraud detection, stress testing, and Shark Tank pitch."

"ShieldGig. Because every delivery matters."

Tone: End strong. Slow down on the last line.

TIMING BREAKDOWN

Section	Start	End	Duration
Opening hook	0:00	0:08	8 sec
Problem	0:08	0:22	14 sec
Solution	0:22	0:40	18 sec
How it works	0:40	0:58	18 sec
AI and fraud	0:58	1:15	17 sec
Demo moment	1:15	1:35	20 sec
Business value	1:35	1:48	13 sec
Execution + close	1:48	1:55	7 sec
Total			1:55

SCREEN SEQUENCE FOR RECORDING

Follow this exact order when navigating the app during recording:

1. Splash screen loading (0:00-0:08)
 2. Dashboard — show greeting, ISS score, nudge card (0:22-0:40)
 3. Policy screen — show Standard Shield card (0:40-0:55)
 4. Claims screen — show 3 claim cards (0:55-1:10)
 5. Claim detail — show fraud check card "12/100 Clean" (1:10-1:20)
 6. Back to dashboard — long press logo (1:20-1:22)
 7. Demo panel opens — visible on screen (1:22-1:25)
 8. Tap Rain Disruption button (1:25-1:28)
 9. Red banner appears on dashboard (1:28-1:32)
 10. Navigate to claims — new PENDING claim visible (1:32-1:35)
 11. Wait 3 seconds — APPROVED (1:35-1:38)
 12. Wallet screen — balance increased (1:38-1:42)
-

RECORDING TIPS

Voice:

- Speak at 70 percent of your normal conversation speed
- The script sounds fast when you read it silently — it is actually correct speed when spoken aloud with natural pauses
- Pause 0.5 seconds after every period
- Emphasize these specific words: "automatically", "zero", "never", "specifically their zone"

Screen:

- Increase Chrome zoom to 150 percent so the mobile-width app looks larger on screen
- Use keyboard shortcuts to navigate (not mouse clicks — smoother for recording)
- Practice the demo trigger sequence twice before recording

Recording setup:

- Windows Game Bar: Win + G → Record
- Loom: free, uploads automatically, gives you a public link immediately
- OBS: best quality but needs setup

If you make a mistake:

- Do not stop recording
- Pause 3 seconds
- Continue from the last natural sentence break
- Edit out the pause in post (CapCut free, DaVinci Resolve free)

Upload to:

- YouTube (set to Unlisted — not Private, not Public)
- Copy the link and paste into your README and submission form

BACKUP SCRIPT (If Demo Fails)

If the app crashes or demo does not work during recording, use this narration instead of the live demo section:

"In our prototype, when rainfall in Karthik's Adyar zone crosses the 64 millimetre threshold, our system generates a claim automatically, runs a fraud check scoring 12 out of 100, and

credits 595 rupees to his wallet — all before Monday morning. The worker sees one notification. The insurer sees the full audit trail."

This describes the demo without showing it live — still valid for Phase 1.
